

EXPLICAÇÃO LPROG

GRUPO 2DI2

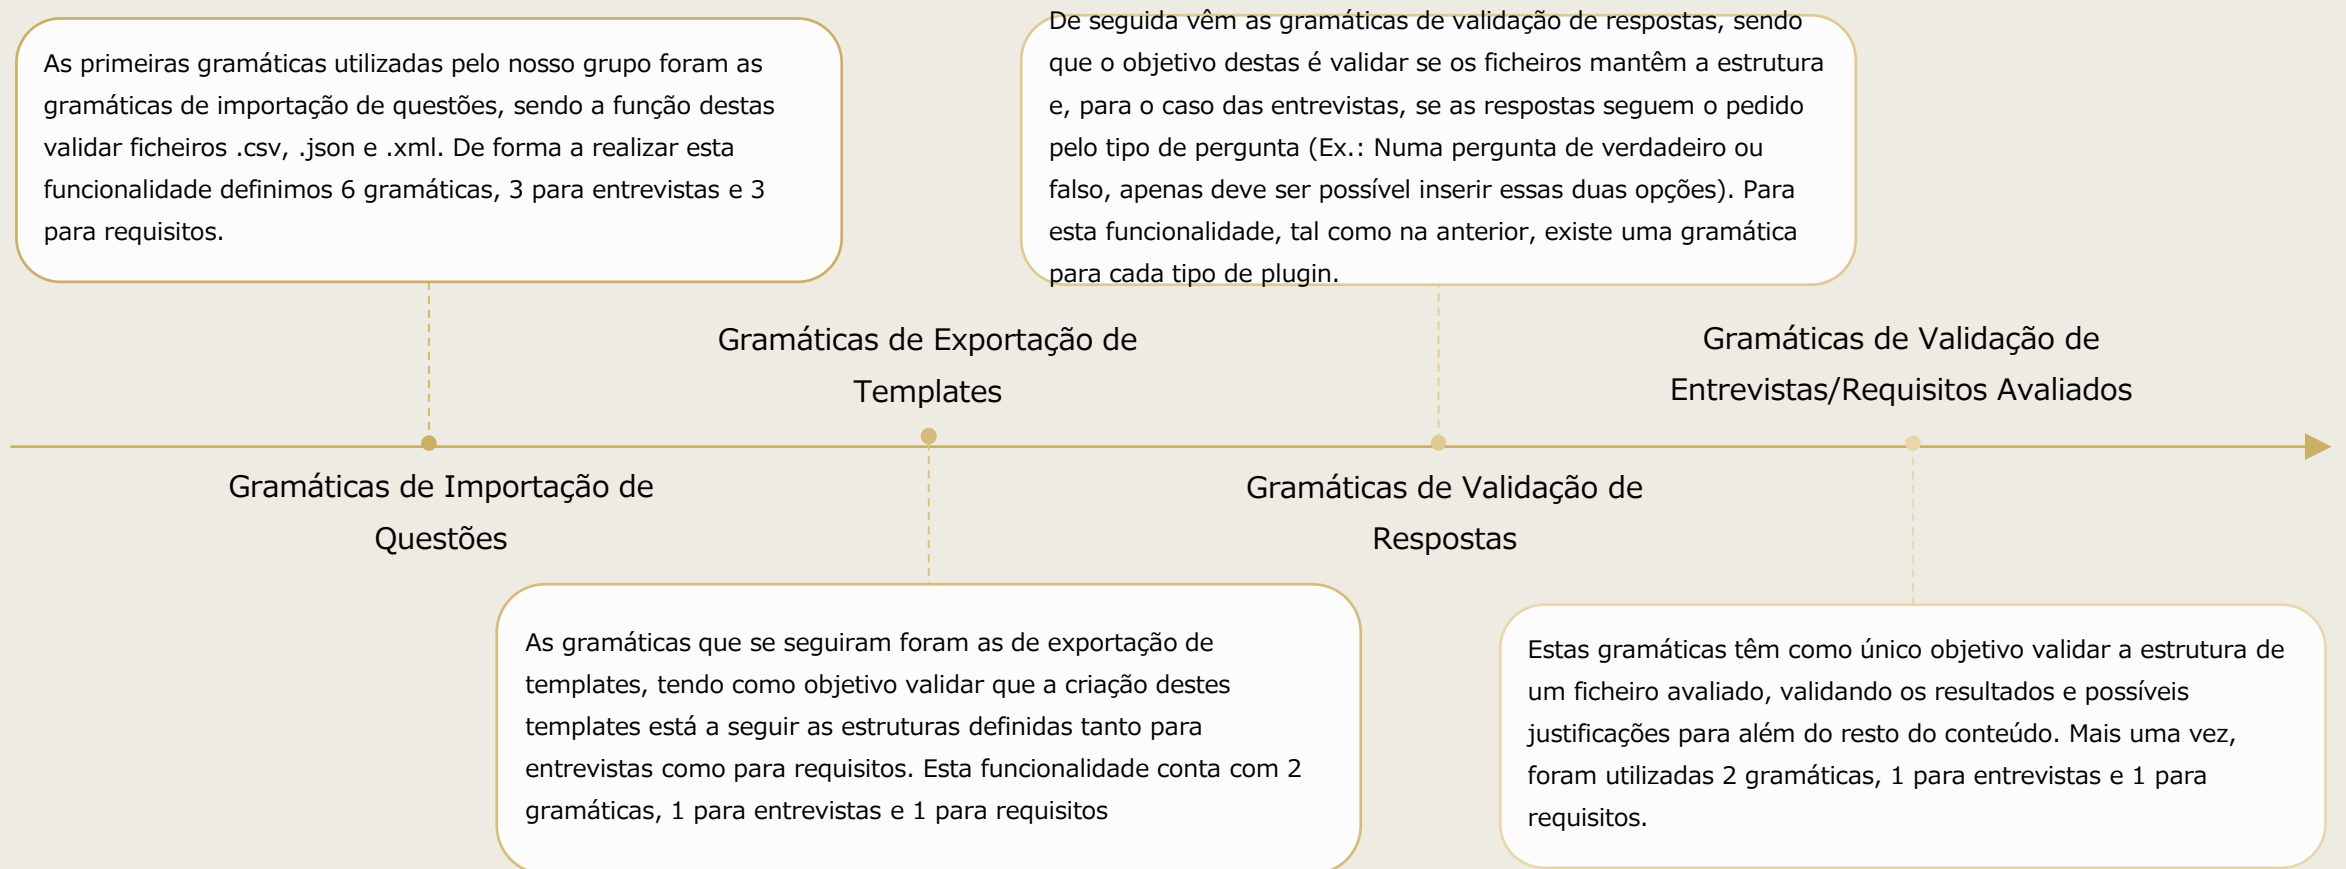

Temas Abordados:

- Uso das gramáticas no Projeto;
- Gramáticas Utilizadas;
- Uso de Listeners e de Visitors;
- Overview.

Introdução

Este documento tem como objetivo explicar sucintamente as gramáticas criadas e utilizadas por nós no projeto integrador de LAPR4. Também iremos apresentar as nossas razões e o nosso pensamento para explicar o uso de Listeners ou de Visitors nas diferentes funcionalidades.

Linha Cronológica das Gramáticas

Gramáticas de Importação de Questões

OBJETIVO E UTILIZAÇÃO DAS GRAMÁTICAS:

- Estas gramáticas foram criadas com o objetivo de através de ficheiros de extensão .csv, .json ou .xml verificar se estes seguem a estrutura correta definida entre a equipa e o cliente.
- No âmbito do Projeto Integrador estas gramáticas foram importantes para conseguirmos fazer a importação das questões para os plugins e podermos futuramente carregar os mesmos dinamicamente sempre que necessário.
- Para a parte da importação aproveitamos os Listeners de cada uma das gramáticas, pois, após alguma pesquisa, chegamos à conclusão de que estes são bastante úteis para importação e exportação de dados.
- Sendo assim, percorremos toda a Parse Tree e através dos Listeners obtivemos as informações necessárias para importar as questões para o sistema.
- Estas gramáticas foram concebidas para as User Stories: US-1008, US-1009 (Requisitos) e US-1011 (Entrevistas).

Gramática InterviewCSV.g4

ESTRUTURA DESEJADA:

"Tipo de Questão";"Cotação da Pergunta";"Tipo de Cotação";"O Corpo da Questão";"Uma Possível Resposta";"A cotação da resposta";"Outra Possível Resposta se necessário";"A cotação da resposta"

Exemplo:

```
"Choice, with single answer";"20";"%";"What is the primary use of HTML? [1] Styling web pages [2] Structuring web pages [3] Server-side computations";"2";"100"
"Choice, with multiple answers";"20";"%";"Which of the following are sorting algorithms? [1] Bubble Sort [2] Quick Sort [3] Binary Search [4] Depth-First Search";"1";"50";"2";"50";"1 2";"100"
"True/False";"10";"%";"Is JavaScript a compiled language?";"False";"100"
"Choice, with single answer";"20";"%";"Who created the C programming language? [1] Dennis Ritchie [2] James Gosling [3] Guido van Rossum";"1";"100"
"Choice, with multiple answers";"20";"%";"Which of the following are data structures? [1] Array [2] Queue [3] Graph [4] Gradient";"1";"20";"2";"35";"4";"45";"1 2 4";"100"
"True/False";"10";"%";"Is Python an object-oriented programming language?";"True";"100"
```

Gramática InterviewCSV.g4

ESTRUTURA DESEJADA (CONT.):

- O tipo de questão deve ser um dos seguintes tipos:
 - Verdadeiro Ou Falso;
 - Resposta Curta;
 - Resposta com número inteiro;
 - Resposta com número decimal;
 - Resposta com Data;
 - Resposta com Tempo;
 - Resposta com Escala Numérica;
 - Escolha singular;
 - Escolha Múltipla;
- As cotações das perguntas devem ser entre 0 e 100 e o seu tipo deve ser percentagem, valores ou pontos;
- As cotações das possíveis respostas devem ser entre 0 e 100 e o seu tipo é predefinido como percentagem;

Gramática RequirementsCSV.g4

ESTRUTURA DESEJADA:

"Corpo da Questão";"Uma possível resposta/Outra possível resposta caso necessário";"Justificação caso não sejam atingidos os requisitos minimos nesta questão"

Exemplo:

```
"How long have you been involved in web development? (1 | 2 | 3 | 4 | 5+ years)";"1/2/3/4/5+
years";"Experience in web development is crucial for understanding the complexities of modern web
applications."
"Can you list the programming languages you've utilized in your projects? (Ruby | PHP | TypeScript |
Go)";"Ruby/PHP/TypeScript/Go";"Knowledge of multiple programming languages shows versatility and
adaptability."
"Have you ever developed a mobile app? (Yes | No)";"Yes/No";"Experience in mobile app development is
important for creating responsive, user-friendly applications."
"Could you tell us which databases you've worked with in your projects? (Oracle | Firebase | MariaDB |
CouchDB)";"Oracle/Firebase/MariaDB/CouchDB";"Understanding different databases is key for efficient data
management."
"Which version control systems are you familiar with? (Perforce | Bazaar |
CVS)";"Perforce/Bazaar/CVS";"Version control systems are essential for collaborative and error-free
coding."
"Have you ever administered a database? (Yes | No)";"Yes/No";"Database administration skills are
important for maintaining data integrity and security."
"Could you tell us which cloud platforms you've used in your projects? (IBM Cloud | DigitalOcean |
Heroku)";"IBM Cloud/DigitalOcean/Heroku";"Experience with cloud platforms is necessary for modern,
scalable applications."
```

Gramáticas de Exportação de Templates

OBJETIVO E UTILIZAÇÃO DAS GRAMÁTICAS:

- Estas gramáticas foram criadas com o objetivo de validar que ficheiros de entrevistas ou de requisitos seguem a estrutura definida.
- No âmbito do Projeto Integrador estas gramáticas foram usadas de forma a conseguirmos validar que os templates gerados pelo programa estavam a ser gerados de forma correta e seguindo os requisitos do cliente.
- Para estas funcionalidades não foram utilizados nem Listeners nem Visitors e apenas percorremos as Parse Trees de forma a verificar se existiam ou não erros de sintaxe.
- Estas gramáticas foram concebida para as User Stories: US-1012 (Entrevistas) e US-2003 (Requisitos)

Gramática Interview.g4

ESTRUTURA DESEJADA:

TITLE: Software Engineer Interview

NAME:

EMAIL:

COTATION: 30%

QUESTION TYPE: Choice, with single answer

QUESTION: What is the capital of France?

[1] London

[2] Paris

[3] Berlin

ANSWER:

COTATION: 30%

QUESTION TYPE: True/False

QUESTION: Python is a statically typed language.

ANSWER:

COTATION: 40%

QUESTION TYPE: Short text answer

QUESTION: What is the name of the process to find bugs in software?

ANSWER:

COTATION: 30%

QUESTION TYPE: True/False

QUESTION: Python is a statically typed language.

ANSWER:

Requisitos:

- Para além dos requisitos já mencionados na parte das gramáticas de importação, nesta gramática é exigido que exista um campo para: o título do Template, o nome do candidato, email do mesmo e para as respostas do candidato para cada uma das perguntas.
- O corpo da questão pode conter opções dependendo do tipo e caso contenha o mesmo deve ter o identificador da opção e o texto da opção (Ex.: [1] Texto da Opção).

Gramática Requirements.g4

ESTRUTURA DESEJADA:

TITLE: Data Scientist

NAME:

EMAIL:

Enter the number of years of experience (integer)

ANSWER:

Select one Degree (none | bachelor | master | PhD)

ANSWER:

Select one or more Programming Languages (python| java | javascript | scala | swift | ruby | r | sql)

ANSWER:

Requisitos:

- Para além dos requisitos já mencionados na parte das gramáticas de importação, nesta gramática é exigido que exista um campo para: o título do Template, o nome do candidato, email do mesmo e para as respostas do candidato para cada um dos requisitos;
- As questões devem começar com um #;
- As opções devem ser mostradas entre parênteses e separadas por um separador “|”.

```

Gramáticas de Validação de Respostas

OBJETIVO E UTILIZAÇÃO DAS GRAMÁTICAS:

- Estas gramáticas foram criadas com o objetivo de validar as respostas contidas nos ficheiros preenchidos pelos candidatos.
- No âmbito do Projeto Integrador estas gramáticas foram usadas de forma a podermos validar o tipo de input esperado e o tipo de input recebido e também para verificar se o ficheiro não foi retornado com uma estrutura errada antes do ficheiro ser carregado para o sistema.
- Para estas funcionalidades foram utilizados Visitors de forma a podermos verificar se o email do ficheiro que está a ser carregado para o sistema e associado a um candidato corresponde ao email desse mesmo candidato.
- Foram também utilizados Visitors para avaliar as respostas dos candidatos, percorrendo estes a Parse Tree e coletando as respostas que depois irão ser usadas para calcular ou definir um resultado final.
- Estas gramáticas foram concebida para as User Stories: US-1017 (Entrevistas), US-2004 (Requisitos), US-1018 (Entrevistas) e US-1015 (Requisitos).

Gramática InterviewAnswers.g4

ESTRUTURA DESEJADA:

TITLE: Software Engineer Interview

NAME: Paulo

EMAIL: micro@email.com

COTATION: 20%

QUESTION TYPE: Choice, with single answer

QUESTION: What is the primary use of HTML?

[1] Styling web pages

[2] Structuring web pages

[3] Server-side computations

ANSWER: 2

COTATION: 20%

QUESTION TYPE: Choice, with multiple answers

QUESTION: Which of the following are sorting algorithms?

[1] Bubble Sort

[2] Quick Sort

[3] Binary Search

[4] Depth-First Search

ANSWER: 1 2

COTATION: 10%

QUESTION TYPE: True/False

QUESTION: Is JavaScript a compiled language?

ANSWER: False

Requisitos:

- Os mesmos requisitos herdados das gramáticas anteriores;
- Os tipos de questão aceitam os seguintes inputs de resposta:
 - Verdadeiro Ou Falso -> "True" ou "False";
 - Resposta Curta -> Qualquer tipo de texto;
 - Resposta com número inteiro -> Números Inteiros;
 - Resposta com número decimal -> Números Decimais;
 - Resposta com Data -> Datas com o formato dd/mm/aaaa;
 - Resposta com Tempo -> Tempos com o formatos hh:mm(:ss)*;
 - Resposta com Escala Numérica -> Números no formato n ou n-n;
 - Escolha singular -> Um caractere ou um número;
 - Escolha Múltipla -> Uma sequência de caracteres ou de números sendo cada número ou caractere separado por um espaço;
- O email deve ter o formato texto@texto.

*opcional

Gramáticas de Validação de Entrevistas/Requisitos Avaliados

OBJETIVO E UTILIZAÇÃO DAS GRAMÁTICAS:

- Estas gramáticas foram criadas com o objetivo de validar os ficheiros avaliados com notas e resultados finais.
- No âmbito do Projeto Integrador estas gramáticas foram aplicadas de forma a garantir que os ficheiros gerados depois da avaliação e análise automática feita pelo sistema estão a ser criados sem erros de sintaxe.
- Para estas funcionalidades não foram utilizados nem Listeners nem Visitors e apenas percorremos as Parse Trees de forma a verificar se existiam ou não erros de sintaxe.
- Estas gramáticas foram concebida para as User Stories: US-1018 (Entrevistas) e US-1015 (Requisitos).

Gramática EvaluateInterviewAnswers.g4

ESTRUTURA DESEJADA:

TITLE: Software Engineer Interview

NAME: Paulo

EMAIL: micro@email.com

FINAL GRADE: 100%

COTATION: 20%

QUESTION TYPE: Choice, with single answer

QUESTION: What is the primary use of HTML?

[1] Styling web pages

[2] Structuring web pages

[3] Server-side computations

ANSWER: 2

GRADE: 100%

COTATION: 20%

QUESTION TYPE: Choice, with multiple answers

QUESTION: Which of the following are sorting algorithms?

[1] Bubble Sort

[2] Quick Sort

[3] Binary Search

[4] Depth-First Search

ANSWER: 1 2

GRADE: 100%

COTATION: 10%

QUESTION TYPE: True/False

QUESTION: Is JavaScript a compiled language?

ANSWER: False

GRADE: 100%

Requisitos:

- Os mesmos requisitos herdados das gramáticas anteriores;
- As notas devem ser entre 0 e 100 e o seu tipo deve ser percentagem, valores ou pontos;

ESTRUTURA DESEJADA:

TITLE: Software Engineer Requirements

NAME: Paulo

EMAIL: micro@email.com

RESULT: REJECTED

How long have you been involved in web development? (1 | 2 | 3 | 4 | 5+ years)

ANSWER: 5+ years

REQUIREMENT RESULT: MET

Can you list the programming languages you've utilized in your projects? (Ruby | PHP | TypeScript | Go)

ANSWER: RubyPlus

REQUIREMENT RESULT: NOT MET

JUSTIFICATION: Knowledge of multiple programming languages shows versatility and adaptability.

Have you ever developed a mobile app? (Yes | No)

ANSWER: Yes

REQUIREMENT RESULT: MET

Requisitos:

- Os mesmos requisitos herdados das gramáticas anteriores;
- O resultado final deve ser: “APPROVED” ou “REJECTED”;
- O resultado de cada requisito deve ser: “MET” ou “NOT MET”;
- No caso do resultado de cada requisito ser “NOT MET” deve ser adicionada uma justificação.

```

Overview

Em suma, foram definidas várias gramáticas para o projeto integrador de LAPR4 e para a unidade curricular de LPROG. Estas gramáticas foram usadas para analisar a estrutura dos ficheiros e para validar perguntas e respostas. Como grupo definimos o uso de **Listeners** para as funcionalidades de importação e **Visitors** para as funcionalidades de avaliação de respostas e validação de emails presentes nos ficheiros. Acreditamos que o uso destas ferramentas foi essencial para o sucesso do projeto, pois permitiram-nos desenvolver diferentes funcionalidades de forma mais eficiente e organizada.

Overview (Cont.)

- **Pontos positivos:**
 - Vasta variedade de gramáticas;
 - Utilização tanto de Visitors como de Listeners.
- **Pontos menos positivos:**
 - Organização das regras existentes nas diferentes gramáticas.
